Education

Shandong University — Shandong, China
Bachelor of Engineering in Computer Science and Technology — *Sep 2000 – Jul 2004*

Work Experience

EyeCool — Beijing, China
Software Architect — *Jan 2009 – Present*

- Lead technology selection and architectural design for enterprise software systems.
- Analyze and resolve complex performance bottlenecks and production issues.
- Provide technical guidance on product architecture and long-term development strategy.
- Design and manage AI model training workflows.

Projects

Facial-Based Terminal Access Control System — Jul 2024 – May 2025

- Designed and implemented a centralized management platform for terminal devices, license distribution, terminal monitoring, and user, organization, and device management.
- Designed the system to support more than 10,000 terminals online simultaneously.
- Developed an AI-based review system capable of identifying users from a database containing over 10 million facial images.
- Designed and implemented a C++ terminal application that synchronizes data with the server and performs facial authentication during user login.
- Developed a self-updating module in Python to monitor application health, detect new releases, and automatically update the terminal software.
- Built a live video streaming client using RTMP and FFmpeg to stream video to the server when initiated by an administrator.

MEGA - Large-scale Biometric Identification System — Apr 2024 – Present

- Designed and implemented a large-scale biometric identification system supporting hybrid biometric search and authentication across databases containing hundreds of millions of records.
- Optimized the system to maintain response times within seconds for large-scale searches.
- Designed and implemented an expert review platform for verifying suspicious matching results.
- Implemented support for major biometric standards, including ISO/IEC 19794, ISO/IEC 19784, ISO/IEC 19785, ISO/IEC 19109, ISO/IEC 24722, ICAO 9303, MOSIP, and related standards.
- Developed a high-performance caching mechanism to synchronize with the database and significantly improve feature loading performance.
- Designed a scoring protocol that dynamically adjusts matching accuracy when multiple biometric modalities are available.

NUWA - AI Training Management System — Mar 2022 – Jul 2024

- Designed and implemented an AI training management platform supporting dataset management, model training, artifact management, resource allocation, and model deployment as online services.
- Developed a Kubernetes-based scheduling module for efficiently allocating training jobs across computing resources.
- Built a drag-and-drop web-based workflow editor that enables users to visually construct AI training pipelines and monitor execution status in real time.

Others

- **EC-RPC** Designed and implemented a high-performance RPC framework supporting multiple communication protocols, including Unix Domain Socket, TCP, Named Pipe, and Shared Memory, to improve system stability and communication efficiency.
- **Smart BIOS** Designed and implemented a distributed biometric management, verification, and identification platform with dynamic scalability and automatic resource scheduling based on system performance.

Skills

Programming Languages: Java, C++, Python, JavaScript, SQL, Go, Rust

Frameworks: Spring, Boost, Qt, BPMN, Vue.js, jQuery, WASM
